

The CEIP Gran Canaria is located in the capital of the island of Gran Canaria in Spain. This area has a population working mostly in the service sector. The area has grown significantly in recent years and has many possibilities. Regarding the integration of the center into the environment, it is noteworthy that it is open to cultural and sports activities promoted by the center, for empowering others especially students the value of solidarity organizing every year a conference of solidarity

We have 460 students and 25 teachers.

An Erasmus student can help us improve the language proficiency of teachers and students at the same time we establish spaces for training and exchange with other educational systems.

Being initiating us in a Comenius project we would like also to have an aid to develop the linguistic content of the physical education area since the project has the objective area. So the student profile we need is related to the education industry.

#### **Main Objectives**

- To improve the linguistic competence
- Expand the physical education curriculum
- Meet other educational systems
- Provide a forum for Erasmus student training on our education system
- Involve them in school projects
- Raising awareness of the European dimension
